New in FSAM v2.0.1

Resolved issues

Forcepoint Security Appliance Manager version 2.0.1 provides the resolution for several issues to reduce vulnerabilities and enhance the user experience.

Upgrading to FSAM v2.0.1

To upgrade to FSAM v2.0.1, uninstall the older FSAM version using Windows Control Panel, and then install FSAM v2.0.1 using the installer tool. See the Forcepoint Security Appliance Manager Installation Guide.

Upgrades from v2.0.0 to 2.0.1 can be done through the FSAM itself. See the Forcepoint Security Appliance Manager User Guide for more information.

Benefits

Benefits of the Forcepoint Security Appliance Manager include:

- Centralized management for both physical and virtual appliances for Web and Email Security. This is particularly useful for those planning to move to the Cloud, allowing them to replace aging appliances with virtual appliances as an interim solution so they can maximize the return on their total appliance investment without sacrificing visibility or control.
- No need for additional investments because it resides in the same server as the Forcepoint Security Manager.
- Powerful and secure remote access by IT personnel from anywhere at any time: based on pure HTML5 with SSL support and decrypted authentication, it supports the full range of popular web browsers.
- Parity features for long-term TRITON customers.

Hotfix requirements

> **Note**
>
> Before installing a hotfix or using the bulk hotfix feature, verify that the hotfixes are required for the particular issue you are experiencing or for your organization's security position.

To download a hotfix:

1) On the Forcepoint Customer Hub home page, login to your account.

2) Click **Downloads**. On the **My Downloads** page, click **All Downloads**.

3) Appliance hotfixes are available under the Appliance heading of the Email Security or Web Security sections.

See the hotfix ReadMe files for more information.

v8.3 appliances

For version 8.3.x appliances, the Security Appliance Manager requires Appliance-Hotfix-App-8.3.0-018.rpm to be installed in the target V Series, X Series, and Virtual appliances.

> **Note**
>
> Hotfix APP-8.3.0-018 requires the installation of hotfix APP-8.3.0-009

> **Note**
>
> Hotfix APP-8.3.0-009 requires the installation of all dependencies:
>
> - APP-8.3.0-001
> - APP-8.3.0-005
> - APP-8.3.0-008
> - APP-8.3.0-010
> - APP-8.3.0-011
>
> It is not necessary to reboot the appliance after each dependency. Reboot the appliance after installing hotfix APP-8.3.0-018.

v8.4 appliances

For version 8.4.x appliances, the Security Appliance Manager requires Appliance-Hotfix-App-8.4.0-004.rpm to be installed in the target V Series, X Series, and Virtual appliances.
