Language Support

Contents

Forcepoint DLP Language Support

Forcepoint DLP can detect content in a wide variety of languages. The exact languages supported varies by component, and the level of support varies by language.

■ Fingerprinting supports all languages in the table below.

■ Custom dictionaries support all languages in the table below.

■ Machine learning is language-agnostic except for Chinese, Japanese, and Korean.

■ The languages supported by the OCR server depend on whether the OCR language pack is installed.

    ■ Users of Forcepoint DLP version 8.6 and 8.7 do not need to install a separate language pack.
