About this guide

This document is a reference point for individuals new to the Classifier product suite. The document lists:

- the documents included with the Classifier bundle
- other documents included with other packages
- the Classifier products and components

You can follow the Getting Started Guide to quickly install Classifier Administration and Email and Office Classifier products; establish a test configuration and begin to explore the user effects of that configuration.

The Classifier Administration Server User Guide describes the various features and options supported by Email, Office, OWA, Mail Add-in, Notes and Mobile Classifier.

The Planning Considerations the document describes the various steps and considerations from initial familiarisation through to live deployment of the Classifier products.

NOTE: The Classifier client-side products do not provide user-specific documentation. Instead, Email, Office, OWA and Notes Classifier support the ability to invoke URL links to an organisation's defined website, intranet or similar to provide guidance relating to their own labelling terminology. The Classifier Administration Server provides this configuration.

- Frequently Asked Questions
- Exchange Classifier Administration Guide - Delivered with Exchange Classifier Administration
- Reporting Console Guide - Delivered with Classifier Reporting Console
- Reporting System Guide - Delivered with Classifier Reporting Services
- Classifier for McAfee ePO and DXL Guide - Delivered with the product bundle.
- Box Classifier Guide - Delivered with the Box Classifier bundle.

Classifier Products and Components

If you bought a specific Classifier suite with options then you will receive a base bundle with additional packages. The bundles and packages are as follows.

Base Bundle

- Email Classifier provides Labelling, Marking & release control for secure messaging using Microsoft Outlook.
- Office Classifier provides Labelling and Marking for Microsoft Office applications, including Excel, PowerPoint, Word, Project and Visio.
- File Classifier provides Labelling of any file type through Windows File Explorer.
- Classifier Administration creates Classifier configuration.
- Classifier Management Agent, an optional service component for Email and Office Classifier clients, that runs on the local system to provide: Classifier Configuration update monitoring through a single point of contact; additional control over the time of day/frequency of Classifier Configuration update checks; improved security of the locally held Classifier Configuration; and monitoring of Classifier Clients.
- Classifier API enables classification metadata to be accessed and manipulated programmatically in a Microsoft Windows environment.
- Classifier Reporting Server, a web-based application, enables organisations to provide their end users with the ability to access, design, and manage dashboards and reports effectively and monitor the data classification activities enforced by the Classifier suite of products.

Box Classifier Package

- Box Classifier controls Classifier-labelled documents within the Box environment. Box (www.box.com) is a content management platform that helps people securely store, access, share, and collaborate on files across devices. The Box Governance option provides a metadata system for manual classification and sharing control. Box Classifier automatically synchronises Classifier labels with the Box Governance metadata system and also provides additional quarantine and blocking controls.

CAD Classifier Package

- CAD Classifier for AutoCAD™ provides Labelling and marking extension for the Autodesk AutoCAD™ application and associated files (.DWG and .DXF).
- CAD Classifier for DraftSight™ provides Labelling and marking extension for the DraftSight™ application and associated files.

Classifier for McAfee ePO and DXL Package

- Classifier for McAfee ePO and DXL allows Classifier products to integrate with the McAfee ePolicy Orchestrator (ePO), in order to provide installation and reporting facilities. In addition, other McAfee Data Exchange Layer (DXL) applications can consume events from Classifier applications using the Classifier DXL integration.

Classifier Reporting Package

Classifier Reporting provides a reporting infrastructure, the Classifier Reporting System, together with a fully featured reporting tool in the form of the Classifier Reporting Console.

- Reporting Services provides the server components.
- Reporting Console provides the Reporting Console that displays the data dashboards and reports that are available from the Classifier Reporting System.

Exchange Classifier Package

- Exchange Classifier extends Microsoft Exchange in the form of a Transport Agent allowing you to apply Classifier policy rules to messages in transit. For example, Add a FLOT, Check clearance for recipients, add a recipient. Optionally, message tracking is supported in conjunction with the Classifier Message Tracking Service component.
- Exchange Classifier Administration manages Classifier Exchange configuration.
- Classifier Message Tracking Service tracks selected information from messages passing through the Classifier Routing Agents. The information is stored in an SQL database and maybe interrogated (by Exchange Classifier) to recover a Classification value from an original message when an in-reply- to message is detected with no associated Classification.

LibreOffice Classifier Package

- LibreOffice Classifier brings Boldon James labelling functionality to Calc, Impress, and Writer, running on Microsoft Windows.

Mac Classifier Package

- Mac Classifier extends Microsoft Office for Mac applications, namely Outlook, Word, Excel and PowerPoint, to provide features broadly similar to those offered by Office and Email Classifier for the Windows environment. Classifier Administration Server is used to configure all the Classifier features and the Configuration is published in a manner common to Classifier products.
- Classifier API for Mac enables classification metadata to be accessed and manipulated programmatically in a Mac environment.

Mobile Classifier Package

- Mobile Classifier is a classification-enabled email app for popular mobile device platforms, including Android, iOS and Windows Phone 8.1. The user experience of classification mirrors that of the other Classifier products, including support for single-click classification and policy warnings. A server component is required and is installed on an IIS system. The configuration is performed using Classifier Administration Server.

Notes Classifier Package

- Notes Classifier is an optional product that comprises a client plug-in and server-side scripts which extend IBM Notes and IBM Domino Server. It is designed to interoperate with the Email Classifier and Office Classifier products. The configuration is performed using Classifier Administration Server.

OWA Classifier Package

- OWA Classifier 2016 provides a classification extension for the Outlook Web App (OWA) provided by Microsoft Exchange 2016 and Exchange Online (Office 365). The extension is provided in the form of a web-based Mail Add-In.
- OWA Classifier 2010 provides Labelling, marking & release control for messaging using Microsoft Outlook Web Access (OWA) 2010.

Power Classifier Package

- Power Classifier for Files provides bulk and automated labelling of files using either a Windows application or a set of PowerShell commands.

SharePoint Classifier Package

- SharePoint Classifier extends SharePoint to present Classifier-applied Label values in document library columns and ensures document libraries contain only documents with suitable classifications.

- Power Classifier for SharePoint: Labelling of items in a SharePoint library through either a Windows application or a set of PowerShell commands.
