Summary of new and changed features

Feature	Short description
Forcepoint DLP for Cloud Email	<p>Data Protection Service supports DLP enforcement for outbound email via integration with Forcepoint Email Security Cloud, extending the unified DLP everywhere policy to Forcepoint Email Security Cloud. This integration has been available as a limited availability feature since Forcepoint DLP 8.8.2.</p> <p>Stay tuned to Forcepoint Email Security Cloud for further announcements regarding general availability.</p>
REST API	<p>Forcepoint DLP customers can enjoy the benefits of the REST API service. In this release, the REST API service supports the following:</p> <ul style="list-style-type: none"> • Get Incidents API • Update Incidents API <p>See below for more information.</p>
Forcepoint DLP Cloud Applications supports Microsoft 365 Teams, OneDrive, and SharePoint	<p>Additional granularity was added to Forcepoint DLP Policy enforcement for the DLP Cloud API and DLP Cloud Proxy channels. Now users can define a DLP policy for a specific Microsoft 365 application from the supported list: Teams, OneDrive, and SharePoint.</p> <p>Support for DLP Cloud API is available with the Forcepoint DLP v8.9 release on November 30, 2021. Support for DLP Cloud Proxy will be fully available on December 5, 2021.</p>
Forcepoint Security Manager certified for deployment on Amazon Web Services (AWS)	<p>Forcepoint Security Manager, supplemental DLP server, and Protector as MTA are certified for deployment on AWS. For more information, see the Forcepoint DLP Installation Guide.</p>
Forcepoint Security Manager supports OAuth 2.0 for Exchange Online for Administrators mail notifications	<p>Mail notifications for Forcepoint Security Manager administrators about new and updated administrator accounts can be configured for Exchange Online with OAuth 2.0.</p>

Feature	Short description
Added “Do not report” option to Dynamic User Protection severity	Users can decide if they would like to report specific rules breach to Dynamic User Protection by configuring the Dynamic User Protection severity in DLP rules.
New Classifiers	New, removed, and improved classifiers are listed in <i>New and updated policies and classifiers</i> , page 6.

Feature and platform support deprecation

Feature	Short description
Crawler Agent Standalone Mode	Starting in Forcepoint DLP v8.9.1 (coming in 2022), Forcepoint will remove the option to install the Crawler Agent in a Standalone Mode. Customers will still be able to install the Crawler Agent as part of the Forcepoint DLP supplemental server deployment.

New in Forcepoint DLP

Release Notes | Forcepoint DLP | v8.9 | 30-Nov-2021

Forcepoint DLP for Cloud Email

Data Protection Service supports DLP enforcement for outbound email via integration with Forcepoint Email Security Cloud, extending the unified DLP everywhere policy to Forcepoint Email Security Cloud:

- Enable all rules and policies and manage Forcepoint DLP policy enforcement from the Forcepoint Security Manager across all channels (web, cloud, network, endpoint) now including outbound email.
- Gain a single pane of glass to review Forcepoint DLP incidents, regardless of the enforcement point.
- Leverage a fully managed cloud solution to scale outbound email protection according to your business needs.

This integration has been available as limited availability since Forcepoint DLP 8.8.2. Forcepoint DLP 8.9 will support Forcepoint Cloud Email when it is released at a later date. Stay tuned to Forcepoint Email Security Cloud for further announcements regarding general availability.

REST API

The REST API service allows customers to remotely pull and manage incident data from Forcepoint Security Manager to integrate with SOAR, SIEM, BI and other solutions.

The REST API service allows customers to get Discovery and DLP incidents by verifying optional filters like policy, department, or the Risk Level. In addition, the REST API allows customers to update incidents' Status, Severity, assigned administrator, and more.

The following REST APIs are available:

- Get Incidents API
- Update Incidents API

Make sure you create a Local Account of Administrator from type **Application** on the Forcepoint Security Manager and apply the authentication process before using the service.

To connect an application to Forcepoint DLP through a REST API connection, you need to create an **Application** administrator in the Forcepoint Security Manager on the **Global Settings > General > Administrators** settings page. For more information, see the [Enabling access to the Security Manager](#) topic in the Forcepoint Security Manager Help. The Application administrator type is only supported for Local accounts. Please note that Network accounts cannot be configured as an Application type.

For more information about the Authentication process and using the REST API service, see the [Forcepoint DLP REST API Guide](#).

Forcepoint DLP Cloud Applications supports Microsoft 365 Teams, OneDrive, and SharePoint

Additional granularity was added to Forcepoint DLP Policy enforcement for the DLP Cloud API and DLP Cloud Proxy channels. Now users can define a DLP policy for a specific Microsoft 365 application from the supported list: Teams, OneDrive, and SharePoint.

Support for DLP Cloud API is available with the Forcepoint DLP v8.9 release on November 30, 2021. Support for DLP Cloud Proxy will be fully available on December 5, 2021.

Forcepoint Security Manager certified for deployment on Amazon Web Services (AWS)

Forcepoint Security Manager, supplemental DLP server, and Protector as MTA are certified for deployment on AWS. For more information, see the [Forcepoint DLP Installation Guide](#).

Forcepoint Security Manager supports OAuth 2.0 for Exchange Online for Administrators mail notifications

Mail notifications for Forcepoint Security Manager administrators about new and updated administrator accounts can be configured for Exchange Online with OAuth 2.0.

For more information, see the [Setting email notifications](#) topic in the Forcepoint Security Manager Help.

For more information about getting your Tenant ID, Client ID, and Client secret, see the [Configuring Azure Active Directory to use OAuth2 authentication](#) Knowledge Base article.

Added “Do not report” option to Dynamic User Protection severity

Users can decide if they would like to report specific rules breach to Dynamic User Protection by configuring the Dynamic User Protection severity in DLP rules.

Installation and Upgrade

Release Notes | Forcepoint DLP | v8.9 | 30-Nov-2021

For installation or upgrade instructions, see:

- [Forcepoint DLP Installation Guide](#) (PDF)
- [Forcepoint DLP Upgrade Guide](#) (PDF)

Operating system and hardware requirements

For the operating system and hardware requirements of Forcepoint DLP modules, see the [Deployment and Installation Center](#).

For a step-by step guide to installing Forcepoint DLP, see the [Forcepoint DLP Installation Guide](#).

Before you begin, open the Windows Control Panel and verify that the “Current language for non-Unicode programs” (in the Administrative tab of the Region and Language settings) is set to English. After installation, you can change it back to the original language.

The version 8.9 Forcepoint DLP installer also installs Forcepoint Security Manager version 8.6.3, Forcepoint Email Security version 8.5.4, and Forcepoint Web Security version 8.5.4.

Upgrading Forcepoint DLP

Your data security product must be at version 8.6.0 or higher to upgrade to Forcepoint DLP version 8.9. If you have an earlier version, there are interim steps to perform. See [Upgrading to Forcepoint DLP 8.9](#).

Important

Customers upgrading to Forcepoint DLP 8.9 from any version earlier than 8.8.1 that supports DLP Cloud Applications must connect to Data Protection Service to support the DLP Cloud Proxy, DLP Cloud API, and Cloud Data Discovery channels. To connect to Data Protection Service, request a JSON file with tenant information from Forcepoint Support. If your Data Security Manager is already connected to Data Protection Service, you do not need a new file or any additional action. For more information, see [Configuring Data Protection Service](#) in the Forcepoint DLP Administrator Guide.

Supported operating systems

See the [Certified Product Matrix](#) for information about all supported platforms, including supported browsers.

Resolved and Known Issues for Forcepoint DLP

Release Notes | Forcepoint DLP | v8.9 | 30-Nov-2021

A list of [resolved and known issues](#) in this release is available to Forcepoint DLP customers.

If you are not currently logged in to the Forcepoint support website, clicking the link brings up a Customer Hub login prompt. Log in to view the list.
