- *What's new?*
 - *Integration with Data Protection Service for Email*
- *Previous updates*
 - *2020 updates*
- *Resolved and known issues*

What's new?

Integration with Data Protection Service for Email

Added 1-Jul-2021

Forcepoint Email Security Cloud can now be configured to send email messages that present potential data loss to Data Protection Service for data loss prevention analysis. Data Protection Service returns its findings to the cloud service for logging and policy enforcement.

Use the page **Account > Data Protection Settings** to enable and configure the integration with Data Protection Service. See [Data Protection Settings](#) for more information.

When Data Protection Service is enabled, each new policy is created with a new Data Protection tab. Email messages handled by policies configured to use data protection are sent to Data Protection Service.

Note

Data Protection Service integration is currently available in limited availability status and requires an additional license. If you would like further information on integrating with Data Protection Service, contact your account manager.

Previous updates

2020 updates

For details of new features added, and issues resolved during 2020, please see the [Forcepoint Email Security Cloud 2020 Release Notes](#).
