About this release

This document contains important information about the current release of Forcepoint VPN Client for Android. We strongly recommend that you read the entire document.

Forcepoint VPN Client for Android is an end-user component for use with the Forcepoint Next Generation Firewall (Forcepoint NGFW) solution. Forcepoint VPN Client provides a secure remote connection to your organization's internal network. Strong encryption prevents eavesdropping and modification of the traffic. Forcepoint VPN Client enables easy and secure remote access to private networks where Forcepoint NGFW is used as a VPN gateway.

Note

Forcepoint VPN Client for Android uses the SSL protocol only and by default uses port 443.

System requirements

Forcepoint VPN Client for Android requires Android 13 (Tiramisu) or later. Forcepoint VPN Client can be installed on both phones and tablets.

Android devices with x86 CPUs are not supported.

CAUTION

This version of the Forcepoint VPN Client for Android is optimized for the best performance and security on devices that run Android 13 (Tiramisu) or later. If you are using a device with Android 12 (Snow Cone) or earlier, we recommend you continue using the previous version of the Forcepoint VPN Client to ensure a smooth experience.

Build version

Forcepoint VPN Client client 2.0.5 build version 1026.
