New in the Forcepoint Security Manager

Release Notes | Web, Data, and Email Security Solutions | 28-Feb-2018

Version 8.5 provides updates to the Forcepoint Management Infrastructure.

- *Resolved Issues*

Supported browsers for the Security Manager

For the full list of supported browsers in this version, see the Certified Product Matrix.

When you connect to Security Manager, you are presented with a self-signed certificate. The certificate names Forcepoint LLC as the Issuer. Because browsers do not recognize Forcepoint LLC as a known Certificate Authority, a certificate error is displayed the first time the Security Manager is launched from a new browser. To avoid seeing this error, install or permanently accept the certificate in the browser. After the security certificate is accepted, the logon page is displayed.

Upgrade paths

All of the on-premises security solutions mentioned in this document can upgrade directly to version v8.5.0 from the following versions:

- v8.1.x
- v8.2.x
- v8.3.x
- v8.4.x

Note that direct upgrade is not supported from v8.0.x.

To learn more about the upgrade process and find upgrade instructions for a specific product or set of products, see the Deployment and Installation Center.

Resolved Issues
