4.6.x

Release Notes

Table of Contents

Summary

Introducing Agent 4.6.x a significant update packed with powerful new features and enhancements to streamline your workflows and improve efficiency. This update brings expanded functionality and customization options across metadata handling, email activity tracking, authentication flexibility, and automated maintenance, making it easier than ever to optimize your processes and manage resources effectively.

We encourage you to upgrade to Agent 4.6.0 today, gaining access to these new features and enhancements.

New Features for Agent 4.6.0

→ Power Tools - Update to Read metadata from file and export logs

→ New Email activities - Log the email classification and classification of attachments

→ SaaS authentication - add support for different keycloak URL

→ Automated deletion of old RC artifacts from registry2

→ Store visual markings position but revert other changes

→ Make the print in Outlook Configurable

→ Revamp metadata accessor

→ Agent Label is renamed to Endpoint on Dashboard

Bug Fixes for Agent 4.6.0

→ Japanese characters are not shown correctly in PDF Visual Markings

→ Meeting invites - Two pop ups showing when Send update

→ Cannot open .msg files twice (file is in use)

→ Metadata not added to .vsdx files after classification

→ Right click classification not working for Arabic named PDF files

→ Created time shows as January 1, 1970

→ Enterprise Search - Classification details are not available

→ SAVE CLASSIFIED operation still shows `Presentation1` as Filename and File Path

→ Prefix or Suffix in the subject still uses the tag name and not the alias

→ Classifier isn't displayed when forwarding the meeting

→ The scan does not complete when there is a large amount of files

→ Windows right-click classification doesn't write metadata or visual markings

→ No enforcement pop up message when unclassified .mov file is attached to email.

→ Visual tagging is duplicated when Send Update of meeting invitation

→ Visual marking overlapping when re-classifying PDF file with right-click

→ Explorer settings take precedence over plugin setting of allowing to deescalate the classification and distribution level

→ Power tools runtime error when retrieving agent config with diagnostic tools

→ Unclassified PDF is not classified when Classify attachments same as emails is selected

→ Clean up agent engine config for ED on uninstallation/upgrade

→ Scan was completed but queue continues to update with same files

→ Ribbon icon not updating when classifying the document

→ Metadata Refactor - Fix CLI office app verb handling

→ Improve performance for subsequent scans

→ Agents in VDI environment are unable to connect to the server

→ PowerTools - When fetching config through PowerTools, config is saved with field "visibleToAgent"

→ Database file access issues

→ When opening a classified file, classification is not reflected on ribbon

→ When tagging distribution, tag name is used and not alias

→ Email classification inheritance is not working as expected

→ Reclassified files are not getting updated in subsequent scans

→ Cache path is being displayed in the warning message instead of the file name

→ Custom alert message is not applied when tag is within a tag group

→ Right click classification and Endpoint Discovery not reading metadata correctly

→ Word Save as Pdf - Pdf not classified6Recipient / Recipient domain not populated in Activity tab

→ Adjust auto-update check to ensure proper version gets downloaded and platforms not mixed

→ Text gets selected after clicking the save button
