Introduction

This document will serve as the master file for all the steps required for the deployment of the Data Visibility Software.

Option 1: Workshop

The first option is through labs, this document is shared via email to each client individually.

Option 2: POC or Production Deployment

Step1: Salesforce, Bitrix or other CRM tools

This document is shared via email with each client individually.

Step2: Licence Management

Step3: Register and Install K3 Server for Client and Reseller

This document provides the detailed steps on how to:

1. How to Install K3s for a customer (*Optional*).
2. Deploy getvisibility products.
3. Update your deployment (*Optional*).
4. Backup a configuration (*Optional*).

Step4: Keycloak and Active Directory

Once the product is fully deployed and all pods are up and running, we need to configure authentication.

The below document outlines the steps necessary to configure authentication, create users and even connect to LDAP to allow end-users to log in to the product UI with their AD credentials:

[Keycloak Quick Installation Guide \(Forcepoint Data Visibility & Forcepoint Data Classification\)](#)

Step5: Server configuration

This is the last step of the product deployment.

Refer the Administration Guide, you will find all the necessary information on how to configure and operate the product.
